MY Web Conferences
Working Together to Bridge Communication

Bringing the Human Touch to True Collaboration

How many of us have experienced the e-mail chain that accomplishes nothing other than getting people frustrated and wasting valuable time? Worse yet, the people on the e-mail chain work for the same company! This dilemma is a reality many of us face every day in business. Our people are on the road, working remote or it is just too difficult to pull people together for a quick conversation. MY Web Conferences is designed to provide a simple yet very powerful approach to bringing back the human interaction that will make a company more productive, effective and energized.
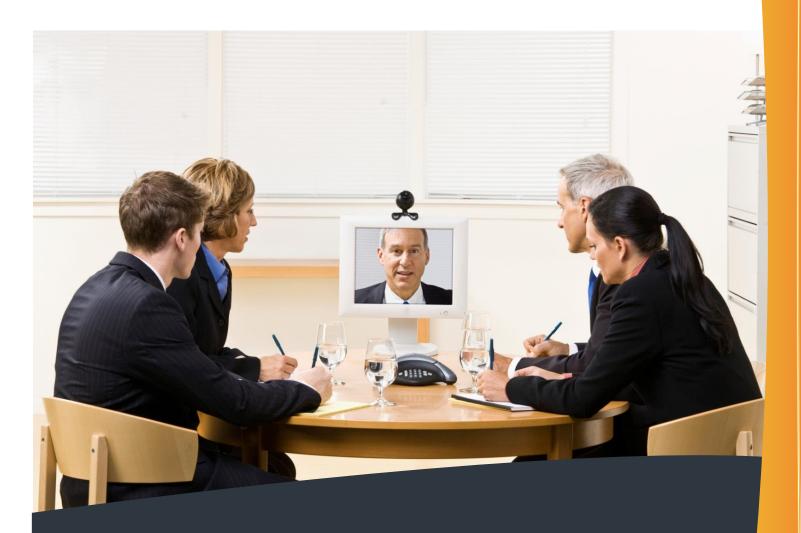

MY Web Conferences promotes productive communication by allowing up to 1,000 participants (inside or outside the company) to be involved in open dialogue, view other participants and presentations, and view, create and modify documents. Key features of MY Web Conferences are:

➢ *File Sharing* – documents can be pulled from any source, viewed and shared

➢ *Electronic White Board* – documents can be displayed, created, and modified by any participant while others are watching. All changes can be saved as a separate document and shared for further review

➢ *Personal Meeting Rooms* – if a side-bar discussion needs to occur, a separate private meeting can be arranged on the spot without disrupting the primary meeting. Once the side-bar is over, then the parties can rejoin the primary meeting still in progress

➢ *Calendar* – share individual calendars making it easier to coordinate a meeting and get an automatic invitation and meeting reminder via email or mobile text

➢ *Record* – you have the option to record and edit including voice over, adding music, save and up load to social media

➢ *Chat and Wikis* – public and private chat, intranet with Wiki capabilities

➢ *Voice-Over-IP* – or land lines integrated into Skype for global connectivity

➢ *SSL/VPN* – strong 2-Factor authentication with forensics for highly secured conversations from anywhere around the globe.

➢ *Anytime, Anywhere, Any Device* – PC, Mac, Smart Phone or tablet

➢ *Global Reach* – available in 17 languages

MY Web Conferences generates significant return on investment from Hard-cost savings as well as productivity gains
